📞 07754335455

Senior Full-Stack Engineer with 10+ years building production systems in customer-facing and data-heavy environments. Strong in backend/API design integrations, operational reliability across both C#/.NET and Python.

I've delivered systems end-to-end, from shaping unclear problems through to production rollout and iteration. Recent work includes integrating machine learning into real workflows, building data pipelines, and exposing prediction services through APIs used by non-technical teams.

Comfortable owning work end-to-end: shaping requirements, building, shipping, and improving based on real usage.

CORE SKILLS

- **Languages:** C#, Python
- **Backend:** .NET Core, ASP.NET MVC, FastAPI, Django, GraphQL, Node.js
- **Frontend:** Vue.js, React, TypeScript, Angular
- **Data & Observability:** Elasticsearch, Kibana, Loki
- **Databases:** SQL, MongoDB, PostgreSQL, SQLite, MySQL
- **Cloud & DevOps:** Azure, Docker, CI/CD (TeamCity, Octopus, Azure DevOps)

EXPERIENCE

11/2022 - Current **Senior Software Developer, Tredz Ltd.**

- Deliver backend and full-stack features across modern and legacy systems (.NET, GraphQL, Vue/TS).
- Built Python-based data processing and prediction services (FastAPI, Django), including data validation, cleaning and feature preparation from inconsistent historical data; added automated tests, API validation and CI integration to ensure reliability.
- Took ownership of a bike build time estimation problem and delivered a machine-learning solution used in day-to-day operations, reducing manual overrides and improving estimate consistency for the operations team.
- Integrated predictions into production .NET APIs and internal tools, ensuring the system was usable and trusted by non-technical teams.
- Improved reliability of integration-heavy workflows using RabbitMQ (retries, idempotency, failure handling).
- Added structured logging and dashboards (Elasticsearch/Kibana) to monitor system health and diagnose issues faster.
- Worked across debugging, refactoring, and test coverage to improve delivery speed while keeping a strong focus on code quality and maintainability.
- Mentored junior developers through code reviews, pairing, and guidance on backend design, debugging, and best practices.
- Owned CI/CD and release practices with safe rollout and rollback.
- **Tech:** C#, .NET Core, GraphQL, Vue.js, TypeScript, Python (FastAPI, Django), ML.NET, RabbitMQ, Azure Service Bus, Elasticsearch, Kibana, Docker, PostgreSQL

07/2020 - 10/2022 **Senior Software Developer, Questgates Ltd.**

- Led backend modernisation efforts, migrating legacy VB .NET Framework services to .NET Core and improving long-term maintainability.
- Delivered REST APIs for claim automation and third-party integrations, significantly reducing manual processing overhead.
- Worked closely with business stakeholders to shape requirements and align technical delivery with product priorities.
- Strengthened engineering practices by introducing consistent unit testing and improving CI/CD workflows.

Tech Stack: .NET Core, C#, SQL Server, REST APIs, xUnit, Moq, Azure DevOps

07/2015 - 06/2020 **Web Developer, Kite Packaging**

- Delivered web applications using Angular, .NET Core, and MVC for customer and admin portals.
- Performed UX testing using Selenium and BrowserStack to validate design and performance across browsers.
- Partnered with designers and QA to enhance usability and accessibility, driving 20% higher customer satisfaction.

Tech Stack: Angular, .NET Core, MVC, Selenium, SQL Server, BrowserStack
